

Solar PPA's for Pubs and Clubs

Solar without the expense and hassle of purchasing a System

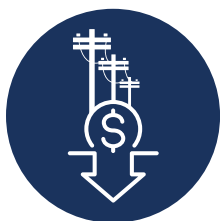

What is a Solar PPA?

A Solar Power Purchase Agreement (Solar PPA) is an arrangement allowing for the installation of solar panels at no cost to an energy user or building owner. Instead of owning the system, the customer purchases the electricity they use from the solar system at a guaranteed reduced rate. We typically reduce electricity costs by 25% on average for electricity generated onsite.

Features

A power purchase agreement will provide electricity at a cost significantly lower than the grid. This gives your pub or club immediate savings and long-term energy security as the cost for electricity provides security against rising energy costs.

Reduction in electricity from day 1

No solar maintenance costs

24/7 remote monitoring

10-15 year guaranteed savings

No upfront costs

How it works

- We fund install, own, operate, maintain, monitor & meter a solar power system on your roof.
- You purchase the electricity produced by the system at a much cheaper rate. This is typically 25% off your electricity rate.

Electricity Consumption before a Solar PPA

All power is purchased from the Electrical Grid.

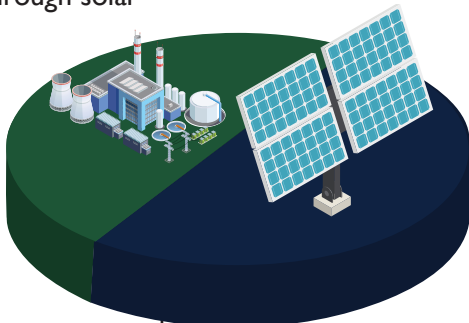

Electricity Cost per Month before a solar PPA

All energy costs are at rates as per the electrical grid.

Electricity Consumption after a Solar PPA

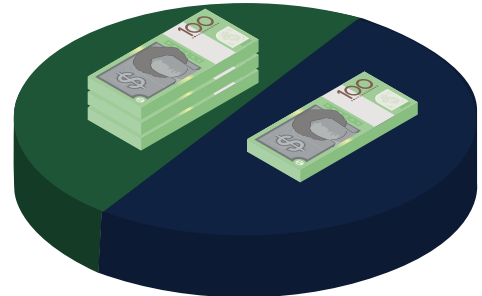

A large component of energy is now produced through solar

**Solar
Electricity**

Electricity Cost per Month after a Solar PPA

There is a substantial reduction in the energy bill, due to the low cost of solar.

The next step

A Solar PPA is one of the best ways to reduce your expenses and create savings without the hassle of purchasing a solar system. Get in touch with us to find out more:
